

CHRYSO®Fluid Optima 175

High range water reducing Super plasticizing admixture

CHRYSO®Fluid Optima 175 is a new generation superplasticizer based on polycarboxylate and modified phosphonate.

It allows concrete with an important workability to be obtained, while reducing the water/cement ratio.

It is developed to maintain fresh concrete workability without compromising the setting time.

CHRYSO®Fluid Optima 175 is especially adapted for ready mix concrete and fluid concrete which require high short and long term strengths.

Indicative characteristics

- Nature: liquid
- Colour: Yellow
- Specific gravity (20°C): $1,055 \pm 0,010$
- pH: $6,00 \pm 1,00$
- Solid content (halogen): $30,00\% \pm 1,50\%$
- Solid content (EN 480-8): $30,50\% \pm 1,50\%$
- Na₂O equivalent: $\leq 1,00\%$
- Cl⁻ ions content: $\leq 0,10\%$
- Shelf life: 12 months

Norms and regulations

- This product conforms to CE marking. The appropriate declaration can be found on our internet site.
- This product conforms to NF 085 certification, which technical specifications are those applied in the non harmonised part of NF EN 934-2.

Domains of application

- All cement types
- Pumped concrete
- Workability retention
- Ready-mix concrete

- Slabs on grade
- Industrial floors
- White or plain concretes
- Concrete for highly reinforced structures
- High Performance Concrete - Very High Performance Concrete

Precautions

Protect from frost.

Avoid prolonged exposure to high temperatures. Should the product freeze, it will recover its properties. After thawing, an efficient agitation is necessary until the product is entirely homogeneous again.

Method of use

Dosage: 0.3 to 3.0 kg for 100 kg of cement.

A 1.0% dosage of the product of the weight of cement is commonly used.

This product must be added to the mixing water.

Should the product be added to fresh concrete, into the mixing truck, it is necessary to mix at high speed, and then at low speed (with a minimum of 3 minutes, at each speed).

The optimum dosage of this product can only be established after trial tests, taking into account the rheological characteristics and the required mechanical performances of the concrete.

Tests

These results were obtained following the methods defined by the ISO 4012 norm (strength tests, graph A) and the EN 12358 norm (consistency tests, graph B).

CHRYSO®Fluid Optima 175

High range water reducing Super plasticizing admixture

Graph A
At equal workability
Concrete formulated with CEM I 42,5

Graph B
For constant water/cement ratio
Concrete formulated with CEM I 42,5 cement

one admixture for the concrete formulation of the foundations, piles and base sections.

Condamine Harbour, Monaco: precast caissons.

Plane bridge Batch #15H, Roissy Charles de Gaulle Airport, France: prestressed concrete, poured via 2 pumps.

Safety

This product is classified as "harmless". In case of exposure, it is recommended to wear your protective equipment.

Before use, refer to the safety data sheet on our internet site www.chryso.com
